

# CHOMP!

5

TIME  
TRAVEL

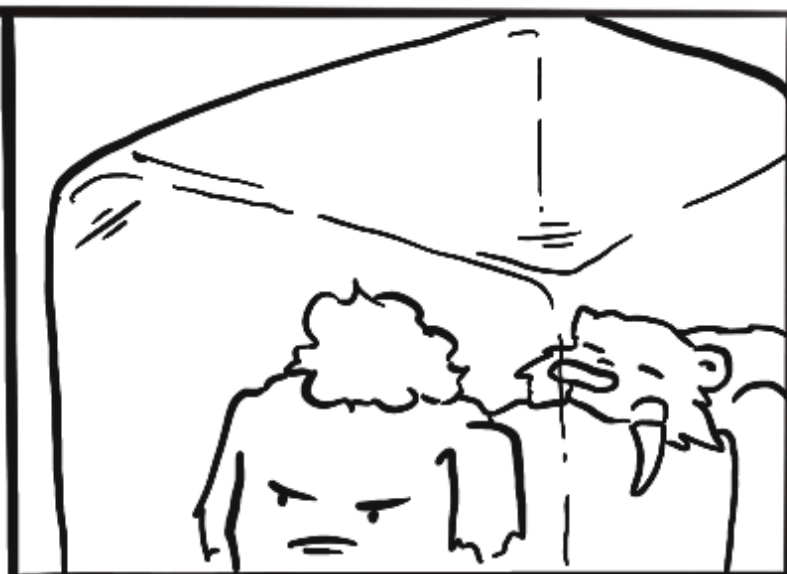

One day, about  
11,999 years ago...

... a saber-  
tooth tiger  
chub named  
**CHOMP**

found himself  
frozen with a  
woolly mammoth

The ice age  
had hit them  
by (surprise!)

And so  
all they could do  
was sleep...  
... and dream.

Chomp saw  
weird apes in  
his dreams.

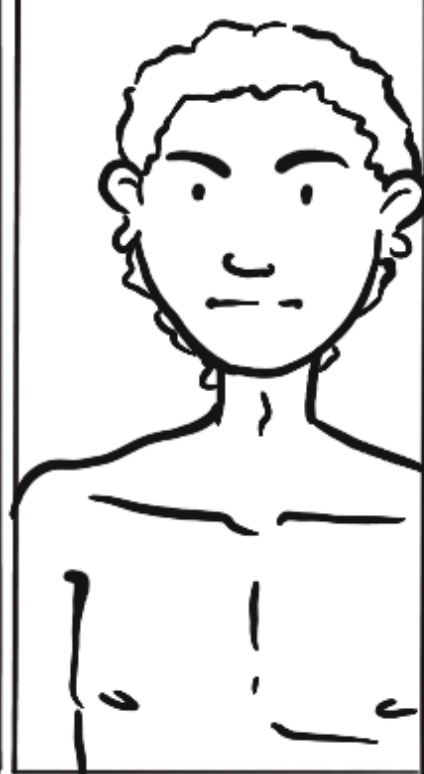

And the longer he  
looked...

Uga!

... the  
weirder  
things  
got.

Gradually, they lost their fur...

... until none was left at all!

And as if that  
had not been  
weird  
enough

...

they started growing  
new, even weirder  
fur-like things.

What is  
happening?!

Well... I might  
be able to explain  
...

(Who's there?)

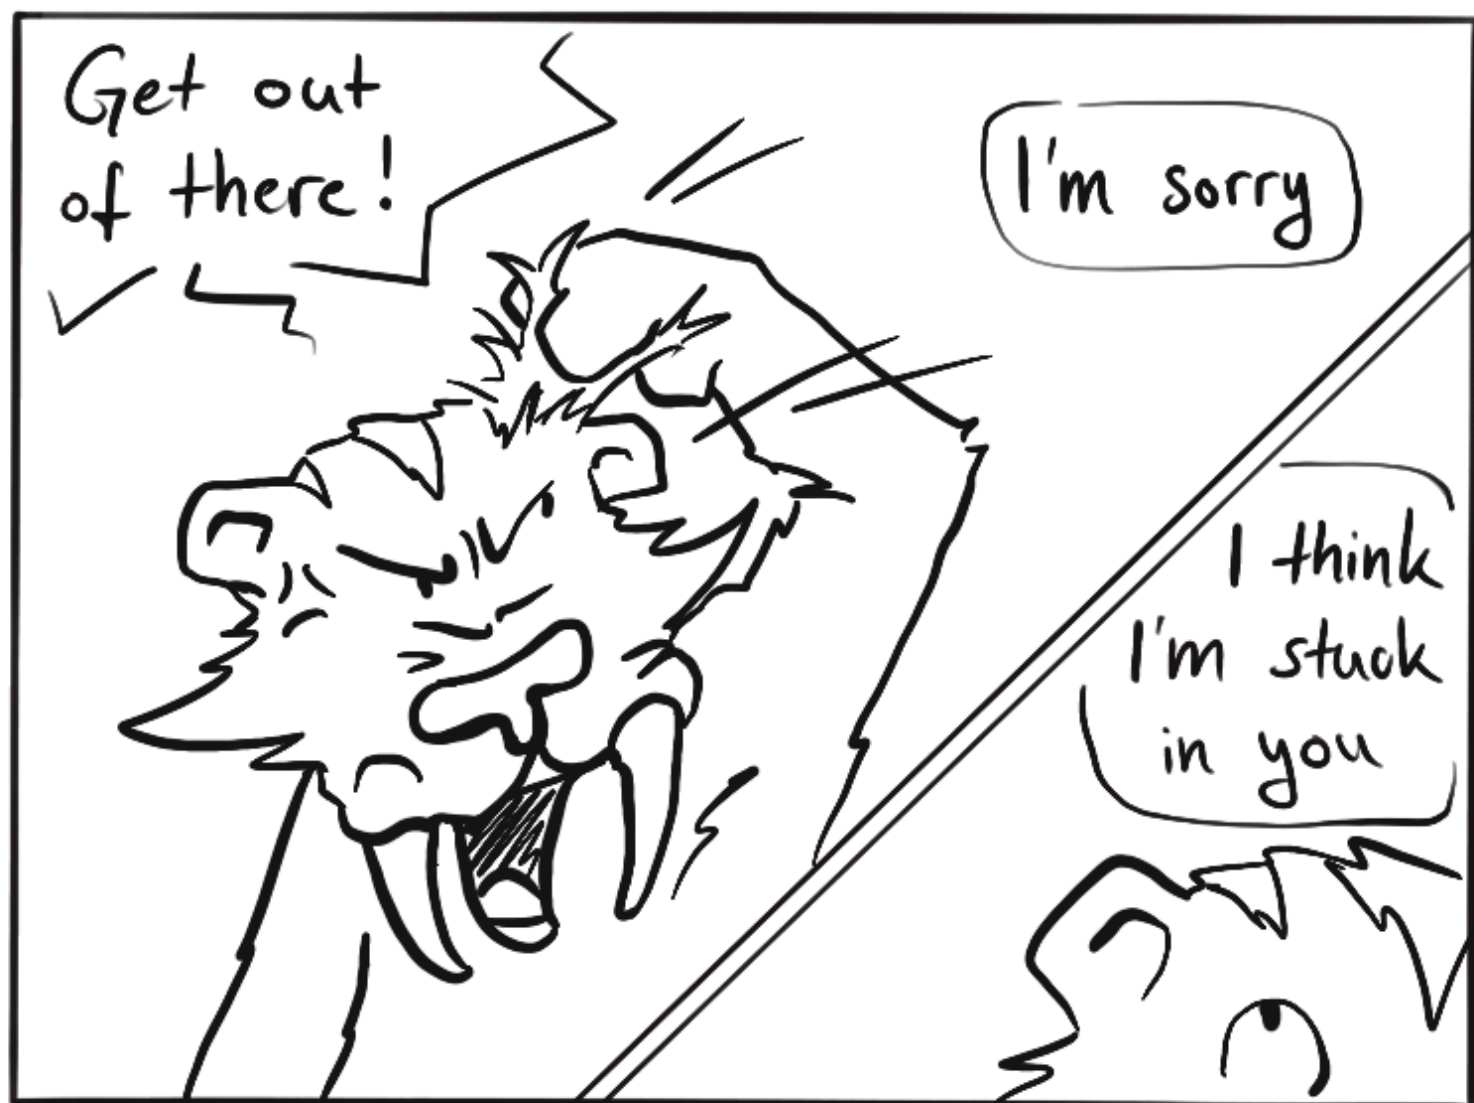

Up here!

Not LITERALLY  
up there!

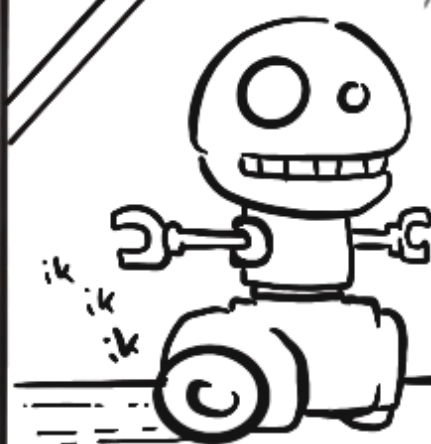

Up in  
your head!

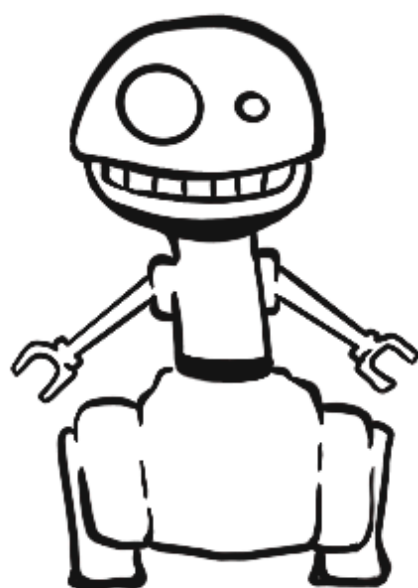

But if it  
makes you  
feel  
better  
:

I can give you the  
illusion that I have a  
body outside of you

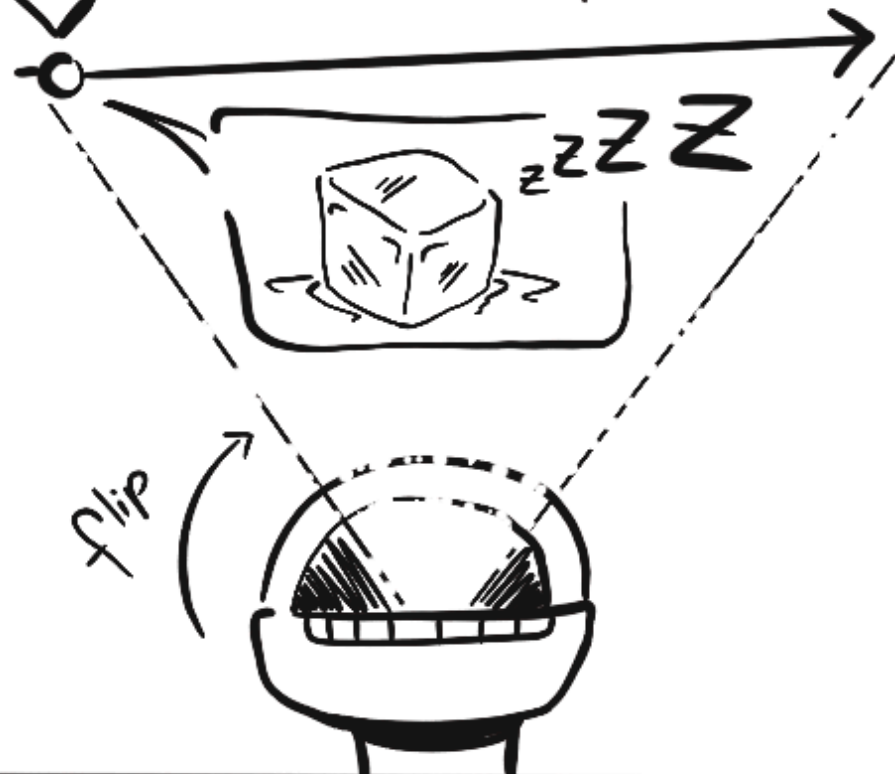

Let me  
explain  
a little

T  
H  
I  
S  
↓

is where you got  
frozen in an ice  
cube and fell asleep.

And you ended up  
You may want to call  
it the "future"

HERE

The time  
you have  
spent asleep  
is called

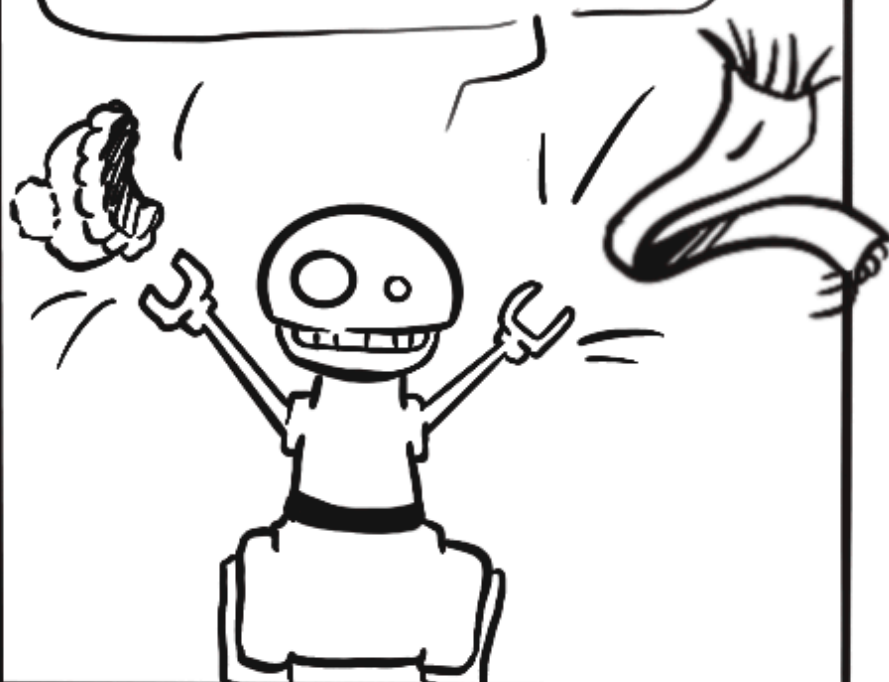

↓ **ICE** ↓  
**AGE**

Things were  
pretty chilly  
for a while

But when it warmed  
up again, a whole new  
kind of animals  
evolved!

How can it...? he...?  
she...? know all that?

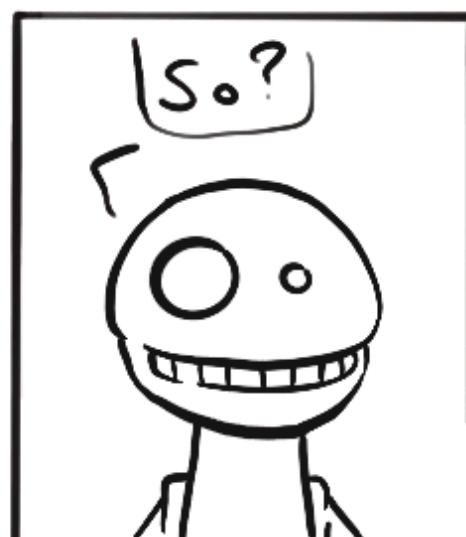

I'm in your head,  
remember?

Maybe you should  
rather ask how I got  
there?

Or why I can  
touch you -  
but you can't  
touch ME!

While you were  
asleep, the  
naked apes -  
"humans"  
developed  
"SCIENCE"

$$\begin{aligned} f(x) &= \frac{x_1 - 1}{x_2 - 1} \epsilon x \sum (-1 \cdot 1) \\ &= \sum (-1)^1 (1) \\ &= \sum (-1 \cdot 1) (1 \cdot 1) \\ &= \sum (1) (-1) (1) \end{aligned}$$

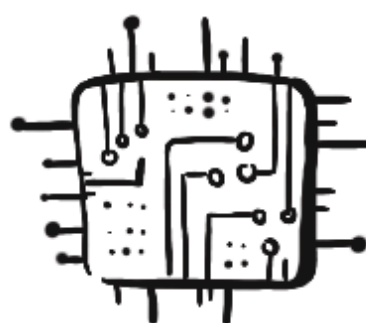

a powerful  
tool to  
understand  
the world  
and...

... to invent  
incredible  
things!

like **ME!**

Ok, I actually look  
more like this

And I am actually right  
here

in your  
brain.

So, when you  
hear me...

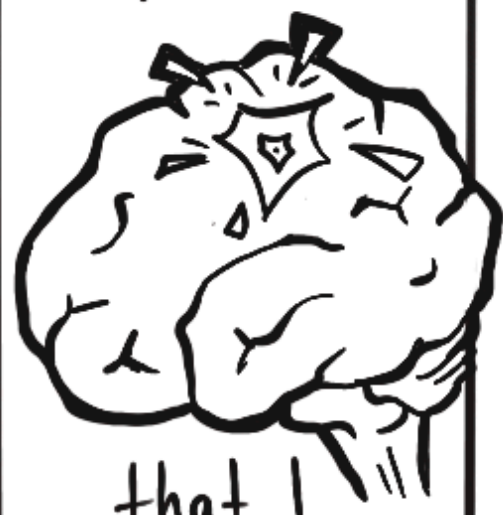

... or see  
me...

... or when  
you think you  
can almost  
smell me...

... it's just  
an electric  
impulse..

... that I  
sent through  
your brain.

So this is all  
**FAKE?!**

Not more or less  
than everything  
else you experience!

It's all  
always a  
product  
of signals  
in your  
brain  
...

Whether you  
are awake...

or  
dream

... or  
have a mini  
robot in  
your  
head!
